Metric DIN 912 hexagon socket head cap screws are cylindrical head screws with an internal hexagonal drive suited for a hex / Allen key or wrench. The internal drive is ideal for situations where externally wrenching screws is impractical such as in applications where limited space is available. Aspen Fasteners offers an extensive range of metric DIN 912 hexagon socket head cap screws as well as other inch and metric industrial fasteners for immediate delivery from stock. The following sizes of metric DIN 912 hexagon socket head cap screws are available for immediate shipping from stock: Diameters ranging from M1.6 to M48, in coarse and fine thread in lengths up to 320mm, in steel and stainless steel A2 and A4. View parts by clicking on the following link: [DIN 912 hexagon socket head cap screws](#).

DIN (Deutsches Institut für Normung - German Institute for Standardization) standards are issued for a variety of components including industrial fasteners as metric DIN 912 hexagon socket head cap screws. The DIN standards remain common in Germany, Europe and globally even though the transition to ISO standards is taking place. DIN standards continue to be used for parts which do not have ISO equivalents. The ISO equivalent for DIN 912 hexagon socket head cap screws is ISO 4762.

1) Mechanical properties of stainless steel for metric DIN 912 hexagon socket head cap screws

Stainless steels can be divided into three groups of steel - austenitic, ferritic and martensitic. Austenitic steel is by far the most common type (>90% of commercial fasteners). The steel groups and strength classes are designated by a four-digit sequence of letters and numbers (eg A2-70) as shown in the following table. DIN EN ISO 3506 governs screws and nuts made from stainless steel.

Steel group	Steel grade	Strength class	Screws, Nuts and Bolts			
			Tensile strength N/mm ²	Tensile strength PSI	Dia range	Nut Load N/mm ²
Austenitic	A2 and A4	50	500	70.000	≤ M39	500
		70	700	100.000	≤ M20	700
		80	800	118.000	≤ M20	800

The tensile stress is calculated with reference to the tensile stress area (see DIN EN ISO 3506-1979). Nuts to be paired with same grade of stainless steel screws

Steel group	Property Strength class	Made From	Characteristics
Austenitic	50	A1, A2	Soft; cold worked, turned and soft pressed fasteners
	70	A2, A4	Cold worked, normal strength formed fasteners
	80	A2, A4	Extreme cold worked, high strength, special applications
